Power Supply Connectors For Industrial Equipment

PX Series

Features

1. Power supply connector for high-current

Withstands voltage of 2200V AC max. and 10A/contact (60A/6 pos.) of rating current.

2. Housing design prevents incorrect insertion

Opening section is designed to prevent reverse insertion and mating direction is easily checked. Additionally, the opening section is keyed to prevent misalignment of plugs in parallel applications.

3. Reduced Size

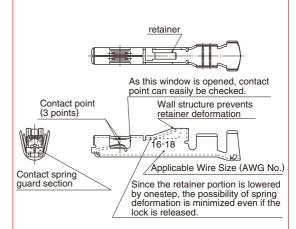

When compared to conventional products, Hirose's plug is smaller in size by 65% and the receptacle is smaller by 55%.

4. Reliable contact structure

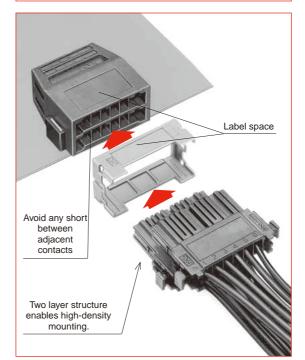

- ①Three point contact
- ②Gold plated contact point (standard) with high-level environmental resistance
- ③Contact spring guard structure
- ④Structure prevents retainer deformation

5. Easy Cable Assembly

- ①Use of dedicated crimping tools will make harness work easier.One tool crimps both AWG#16 and AWG#18 wire.
- ②Positive lock can be felt on contact insertion.
- ③Release of contact lock can easily be performed with dedicated jig, which facilitates the wiring modification after assembly.

- <WARNING>

When the crimp terminal remoral jig is inserted and pushed from the mating face of a connector as shown below, retainer lock of the terminal will be released. Then please extract the cable. If the retainer is too lowered after extracting terminal, put it in a former position and reinsert. Position and direction of the jig top to be inserted are as shown in the Figures below. Be careful that any mistake will lead to the damage of terminal.

How To Extract Crimp Terminal

* Insert the jig top into the peak of convex section on terminal hole.
