Output Voltage Adjustment

The ultra-wide output voltage trim range offers major advantages to users who select the PTH03060. It is no longer necessary to purchase a variety of modules in order to cover different output voltages. The output voltage can be trimmed in a range of 0.8 Vdc to 2.5 Vdc. When the PTH03060 converter leaves the factory the output has been adjusted to the default voltage of 0.8 V.

Efficiency Table (lo	= 7 A)
Output Voltage	Efficiency
Vo = 1.0 V	85%
Vo = 1.2 V	87%
Vo = 1.5 V	89%
Vo = 1.8 V	91%
Vo = 2.0 V	92%
Vo = 2.5 V	93%

Notes:

- Remote ON/OFF. Positive Logic
 ON: Pin 3 open; or V > Vin 0.5 V
 OFF: Pin 3 GND; or V < 0.8 V (min 0.2 V).
- 2. See Figures 1 for safe operating curves.
- 3. A 330 μ F electrolytic input capacitor is required for proper operation. The capacitor must be rated for a minimum of 700 mA rms of ripple current.
- 4. An external output capacitor is not required for basic operation. Adding 330 μ F of distributed capacitance at the load will improve the transient response.
- 5. 1 A/ μ s load step, 50 to 100% lomax, Cout = 330 μ F.
- 6. If utilized Vout will track applied voltage by $\pm 0.3\,\text{V}$ (up to Vo set point).
- 7. The pre-bias start-up feature is not compatible with Auto-TrackTM. This is because when the module is under Auto-TrackTM control, it is fully active and will sink current if the output voltage is below that of a back-feeding source. Therefore to ensure a pre-bias hold-off, one of the following two techniques must be followed when input power is first applied to the module. The Auto-TrackTM function must either be disabled, or the module's output held off using the Inhibit pin. Refer to Application Note 154 for more details.
- 8. Tape and reel packaging only available on the surface-mount versions.
- NOTICE: Some models do not support all options. Please contact your local Artesyn
 representative or use the on-line model number search tool at http://www.artesyn.com/power
 to find a suitable alternative.
